WAVEFRONT ENERGY & ENVIRONMENTAL SERVICES INC. PROGRESS UPDATE ON ROGERS COUNTY

EDMONTON, Alta March 20, 2006/ Wavefront Energy and Environmental Services Inc., a provider and licensor of its proprietary DeepWaveSM (http://onthewavefront.com/dw_what-is-deep-wave.htm) Technology for improved oil recovery and groundwater remediation is pleased to provide an update on activities at Rogers County, Oklahoma.

The Company has recently completed 1 horizontal production well and 5 water injectors. The horizontal well was terminated at 327 feet in lateral length at a measured depth of 481 feet. Initial fluid production measured from the horizontal well was 35 barrels per day at approximate 30 percent water cut. The horizontal well is currently being optimized for productivity. Of the 5 new water injectors 4 offset the horizontal well and active waterflooding has commenced. The Company will be initiating a large scale drilling operation this month where an additional 6 horizontal wells and 17 water injection wells will be drilled and completed. Based on the successful completion of the drilling operation, the first of numerous DeepWaveSM installations in water injectors is scheduled for April 2006.

Wavefront President and CEO Brett Davidson stated, "Over the past several months the Company has been upgrading facilities, reactivating production wells, and establishing baseline production prior to implementing DeepWaveSM stimulation. We have made significant progress at Rogers County and have laid the groundwork for aggressive oil recovery using the Company's DeepWaveSM technology. The next few months should prove very exciting as management anticipates significant production improvements related to the technology."

With the Company's acquisition of the 90% working interest in the existing production, equipment, and 420-acre mineral lease from an arms length party for total consideration of US \$190,000.00, and the focus on production at Rogers County, as well as the imminent start of drilling operations at Greentree Gas and Oil, the Company has allowed the lease it held in Milam County, Texas to expire.

The Company also wishes to announce that a DeepWaveSM stimulation was completed near Red Deer, AB. The client, a major Canadian oil and gas company, is a first time user of DeepWaveSM and applied the technology to reduce drilling induced formation damage. Production results for the stimulation are not available at this time.

Mr. Davidson further commented, "We are enthused by yet another new user of DeepWaveSM and the potential number of new and existing wells the client has that could potentially be stimulated. The Company and its licensee continue to see increased interest in the DeepWaveSM stimulation service and management is seeing this interest translate into inquiries for permanent DeepWaveSM installations during waterflooding."

About Wavefront Energy and Environmental Services Inc.

Wavefront develops, markets, and licenses proprietary technologies in the energy and environmental sectors. The Company's *DeepWave*SM Technology for fluid flow optimization has been demonstrated to increase oil recovery. Within the environmental sector, *DeepWave*SM Technology accelerates contaminant recovery and improves in-ground treatment of groundwater contaminants thereby reducing liabilities and restoring the site to its natural state more rapidly.
