WAVEFRONT ENERGY & ENVIRONMENTAL SERVICES INC.

**PRODUCTION GAINS SEEN IN FORT ST. JOHN
DEEPWAVESM WELL STIMULATION**

EDMONTON, Alta March 24, 2006/ Wavefront Energy and Environmental Services Inc., a provider and licensor of its proprietary DeepWaveSM (http://onthewavefront.com/dw_what-is-deep-wave.htm) Technology for improved oil recovery and groundwater remediation is pleased to provide an update on the DeepWaveSM well stimulation conducted in Fort St. John, BC as announced on March 14, 2006. The well, a horizontal producer, was the subject of an acid stimulation where the DeepWaveSM process was utilized to achieve greater distribution and penetration of the injected liquid.

Prior to the stimulation, average production was 2.3 cubic meters of oil per day. Oil production has been steadily increasing since the DeepWaveSM stimulation. The results of an oil production test conducted on March 20, 2006 indicate the well was producing 6.5 cubic meters of oil per day. This represents an approximate three-fold increase in productivity. Once production has stabilized, we will provide a production update.

About Wavefront Energy and Environmental Services Inc.

Wavefront develops, markets, and licenses proprietary technologies in the energy and environmental sectors. The Company's DeepWaveSM Technology for fluid flow optimization has been demonstrated to increase oil recovery. Within the environmental sector, DeepWaveSM Technology accelerates contaminant recovery and improves in-ground treatment of groundwater contaminants thereby reducing liabilities and restoring the site to its natural state more rapidly.
