

WAVEFRONT TECHNOLOGY SOLUTIONS INC.

POWERWAVE NEARLY DOUBLES INITIAL INJECTION RATE IN MICHIGAN FLOOD

EDMONTON, Alta Nov 30, 2009/ Wavefront Technology Solutions Inc. ("Wavefront"), a world leader in providing innovative solutions for increasing oil field production and enhancing the treatment of contaminated groundwater, is pleased to announce that its Powerwave technology has nearly doubled initial injection rate results for a CO2 based program in Michigan.

Initial results indicate a Powerwave injection rate of approximately 4.0 MMCF/day versus a non-Powerwave injection rate of approximately 2.0 MMCF/day. These increased injection rates combined with lower injection pressures were the early objectives for this operator. Powerwave has achieved both objectives as the increase in injection rate has also been achieved with slightly lower injection pressures.

"Wavefront continues to generate very positive Powerwave results across a wide range of applications," said Wavefront President and CEO Brett Davidson. "This is the second CO2 application where we have seen Powerwave improve injection rates. As we continue with the Michigan program, we will look to increased production rates, slower production decline, and greater ultimate oil recovery."
