

**WAVEFRONT COMPLETES SECOND ON-SHORE STIMULATION FOR PEMEX
Powerwave Single Well Stimulation Use Also Growing in Canada and United States**

EDMONTON, Alta June 28, 2010 – Wavefront Technology Solutions Inc. (“Wavefront” or the “Company”; TSX-V: WEE), a leader in technology development and implementation for improved oil recovery and optimized groundwater remediation is pleased to announce that the second of five Powerwave single well stimulations planned for the Samaria Luna asset has been completed. The objective of a single well stimulation is to re-establish oil production beyond current rates. Oil production results for the initial two Powerwave stimulations showed increased benefit over conventional approaches. Pemex has asked that exact results of the stimulation work not be released until Wavefront completes the entire stimulation program.

“Wavefront continues to make progress in executing on the Pemex non-binding Letter of Intent announced October 27, 2009,” said Wavefront President and CEO Brett Davidson. “Pemex is a very attractive opportunity for Wavefront and we are actively screening the vast number of wells that are presented for stimulation across various assets. For waterflood applications, Wavefront is also working to identify the best targets for Powerwave deployment.”

Wavefront would also like to announce a significant increase in Powerwave single well stimulations. During the third quarter of fiscal 2010, 32 Powerwave single well stimulations were performed in Canada and the United States compared to two performed in the second fiscal quarter.

“We are very happy with the increased interest and confidence in Powerwave for single well stimulations,” said Mr. Davidson. “There is considerable revenue opportunity for Wavefront to leverage the benefits of Powerwave in the stimulation market. “Single well stimulations are a great first step for many operators to experience the benefits of Powerwave prior to implementing permanent Powerwave installations for secondary and tertiary oil recovery.”
